

reliable protection against spreading of infections

spread of pandemics via air routes

Do you know...

that in America every year 1,000,000,000 people fall ill due to viruses spread by air transport?

As a consequence they miss 50,000,000 work days and 60,000,000 school days.

ReSpimask[®]

NANO FIBER

LIFE'S WORTH IT

- Air transport makes it possible for airborne infections to spread quickly and on a global scale
- International airports handle passengers from all over the world, which increases the risk of spreading infections
- There is a simple, effective and affordable solution: ReSpimask[®]
- Unique nanofiber layer provides perfect protection against dangerous bacteria and viruses
