

nanofibers protect dentists from aerosols and viruses

Do you know...

that dentists are constantly threatened by dangerous micro-particles produced when shaving, polishing or filling teeth?

When inhaled on a long term basis, these particles can seriously damage dentists' health.

Tooth polishing produces dangerous micro-particles.

ReSpimask[®]

NANO FIBER

- ReSpimask[®] effectively protects you from both acute and chronic diseases
- RESPILON[®] nanofiber membrane captures viruses, bacteria and solid micro-particles produced during dental procedures
- Aerosol-like composite dust from dental fillings penetrates deep into the lungs – these micro-particles can be captured only by nanofibers
- Nanofiber facemask with respirator-like properties and an aesthetic design helps protect your health, improves your working conditions and professional image

LIFE'S WORTH IT
