

Nanofibers help to fight malignant diseases

Do you know...

that in Central Europe hundreds of children suffering from oncological diseases are wearing ReSpimask® daily?

Thanks to the protection provided by nanofibers, they can safely play with other children, go see a doctor or have a walk with their parents.

ReSpimask®

NANO FIBER

LIFE'S WORTH IT

- The RESPILON® nanofiber membrane captures viruses, bacteria, allergens and smog, thus helping to protect patients with weakened immunity, e.g. after chemotherapy
- We think of the smallest patients as well – to answer their specific needs we have created the children's size ReSpimask Junior®
- Thanks to its excellent breathability, the skin under the mask stays dry which prevents the user from experiencing any unpleasant skin problems
- Soft and hypoallergenic materials contribute to safer and more comfortable life of the patients
