

The latest health and safety equipment and services, including work at height solutions

Mask up

A reusable filtering face mask that has been shown to block 99.9 per cent of viruses, bacteria, air pollution particles and allergens, including coronavirus, has been developed by Respilon.

The RespiPro VK is made from a special nanofibre material featuring 0.01 micrometer-wide filtering pores that are small enough to prevent Covid-19 particles getting through to the wearer. The mask also features

respilon.uk

a special Accelerated Copper Oxide (ACuO) virus-deactivating material, which uses copper to kill and deactivate viruses and bacteria upon contact.

The filtration and sterilisation work inside and out, so the wearer and surrounding people are offered protection.

The nanofibre material is easy to breathe through, and the mask can be worn for up to 30 hours, meaning it replaces an average of 10 disposable masks.

Walk this way

The Original Muck Boot Company has expanded its Chore range of protective work boots for industries such as construction and agriculture with the launch of a slip-on style, lower height 'Chelsea' boot designed to be quick and easy to put on and take off.

The Chore Classic Chelsea is a six-inch high fully waterproof boot that is lined with neoprene to make it flexible and lightweight to wear. The boot is reinforced in both the toe and heel area and features a breathable air mesh lining to help keep the wearer's feet cool.

The boot has reflective pull-tabs at the top to make it easy to pull on and off and the sole is designed to be quick cleaning to remove debris from the treads. There is also Nzym-trademarked technology to help control foot odour inside the boot.

Watch this

DriveTech has launched a series of 90-second videos designed to remind commercial drivers of their moral and legal responsibilities when they get behind the wheel.

The Driver's Mate films use storytelling to 'nudge' drivers towards adopting safe behaviours on the road. The clips can be 'pinged' to workers' phones and mobile devices before they start their driving shifts.

Don't get cut

Brammer Buck & Hickman has launched an online tool designed to make it easier to select the most appropriate cut-protective gloves and sleeves from its Ansell range of hand protection products.

The Hand & Arm Protection Adviser asks the user questions about the type of protection they require when handling items with sharp edges before guiding them to the most suitable glove or sleeve.

Follow the signs

Brady has launched a range of 3D floor signs designed to provide a more eye-catching reminder of Covid-19 social distancing and mask-wearing rules than conventional floor markings.

There are four designs in blue and green, providing instructions on where to stand and walk, maintaining a safe distance when queuing and wearing a face mask.
